## CHAPTER 2

Lara-Hello Jackie ! How's it going ?

Jackie-I'm doing good ! And You ?

Lara-Oh man ! I had soo much fun at school today !

Jackie-Really? Why was it soo fun ?

Lara-Because we learned about Algebra ! Didn't you take that in school today ?

Jackie-..I don't know.. I don't pay attention in school..

Lara-Wow.. Im disappointed..

Lara-Well, anyways.. I should teach you , it is quite fun to do !

Jackie- Okay.. fine! But I hope it is fun ..

Lara- Oh don't worry it will !

Lara-Okay, our first question is  $n+3-5n+12$  !

Jackie-Okay let me think... hmmm..

Jackie-well.. I think it is  $6n+15$  !

Lara- Haha , nice try Jackie , you were very close ! You see ,  $-5 + n = -4$  and  $3 + 12 = 15$  ..  
so the answer would be  $-4n+15$  !

Jackie- oh .. wow you really know your math huh ?

Lara-yes I do !

Lara-Okay let's do another question !

Jackie-Fine, fine !

Lara-alright, what is  $2+4(3n+8)$ ?

Jackie- uhm .. Isn't  $12n+10$  ?

Lara-Nice try.. again.

Jackie-\*sigh\*

Lara- What you would do is ,4 times  $3n$  is  $12n$ . Then 4 times 8 is 32. 12 and 32,bring 2+ which is now  $2+12n+32$ , then add  $2+32$  is 34. So now the question is,  $12n+34$  !

Jackie- WOW ! Very good Lara ! Thanks alot for helping me out.. Next math class I'll sure pay attention thanks to you !
